Euclid and His Twentieth Century Rivals: Diagrams in the Logic of Euclidean Geometry (Studies in the Theory and Applications of Diagrams) Nathaniel Miller

Twentieth-century developments in logic and mathematics have led many people to view Euclid's proofs as inherently informal, especially due to the use of diagrams in proofs. In *Euclid and His Twentieth-Century Rivals*, Nathaniel Miller discusses the history of diagrams in Euclidean Geometry, develops a formal system for working with them, and concludes that they can indeed be used rigorously. Miller also introduces a diagrammatic computer proof system, based on this formal system. This volume will be of interest to mathematicians, computer scientists, and anyone interested in the use of diagrams in geometry.
