Epidemics and Rumours in Complex Networks (London Mathematical Society Lecture Note Series)

Moez Draief, Laurent Massoulié

Information propagation through peer-to-peer systems, online social systems, wireless mobile ad hoc networks and other modern structures can be modelled as an epidemic on a network of contacts.

Understanding how epidemic processes interact with network topology allows us to predict ultimate course, understand phase transitions and develop strategies to control and optimise dissemination. This book is a concise introduction for applied mathematicians and computer scientists to basic models, analytical tools and mathematical and algorithmic results. Mathematical tools introduced include coupling methods, Poisson approximation (the Stein–Chen method), concentration inequalities (Chernoff bounds and Azuma–Hoeffding inequality) and branching processes. The authors examine the small-world phenomenon, preferential attachment, as well as classical epidemics. Each chapter ends with pointers to the wider literature. An ideal accompaniment for graduate courses, this book is also for researchers (statistical physicists, biologists, social scientists) who need an efficient guide to modern approaches to epidemic modelling on networks.

From reader reviews:

Anna Maday:

Nowadays reading books become more and more than want or need but also work as a life style. This reading addiction give you lot of advantages. Associate programs you got of course the knowledge your information inside the book that will improve your knowledge and information. The data you get based on what kind of e-book you read, if you want send more knowledge just go with education books but if you want really feel happy read one along with theme for entertaining for instance comic or novel. Typically the Epidemics and Rumours in Complex Networks (London Mathematical Society Lecture Note Series) is kind of publication which is giving the reader unpredictable experience.

Barbara Erickson:

Do you have something that you want such as book? The publication lovers usually prefer to opt for book like comic, brief story and the biggest an example may be novel. Now, why not seeking Epidemics and Rumours in Complex Networks (London Mathematical Society Lecture Note Series) that give your entertainment preference will be satisfied by means of reading this book. Reading habit all over the world can be said as the way for people to know world a great deal better then how they react towards the world. It can't be explained constantly that reading practice only for the geeky man or woman but for all of you who wants to end up being success person. So , for all of you who want to start studying as your good habit, you can pick Epidemics and Rumours in Complex Networks (London Mathematical Society Lecture Note Series) become your current starter.

Doug Campbell:

Is it an individual who having spare time then spend it whole day by watching television programs or just lying down on the bed? Do you need something new? This Epidemics and Rumours in Complex Networks (London Mathematical Society Lecture Note Series) can be the respond to, oh how comes? A book you know. You are thus out of date, spending your spare time by reading in this completely new era is common not a geek activity. So what these publications have than the others?

Edward Donnelly:

A lot of guide has printed but it differs. You can get it by net on social media. You can choose the top book for you, science, witty, novel, or whatever by means of searching from it. It is called of book Epidemics and Rumours in Complex Networks (London Mathematical Society Lecture Note Series). You can contribute your knowledge by it. Without making the printed book, it could add your knowledge and make an individual happier to read. It is most significant that, you must aware about reserve. It can bring you from one destination for a other place.
